Crash on start. Help?!

System Specs:
Vista 32 bit
AMD dual core
2gb Ram
20gb free space

Hi guys could someone help me? I downloaded the core and map pack(v0.8) it installed fine but when i choose a server and press deploy then the computer crashes to desktop. I'm not sure why this is any ideas?

p.s.By the way not complaining about the mod at all i think its "the best thing since sliced bread"! and anyone who complains and slags bits off deserve to be shot. Keep up the good work guys!

Re: Crash on start. Help?!

Start the game in windowed mode and tell us what the error is.

Re: Crash on start. Help?!

I get the same problem. I think there is a problem with 0.8 for vista users because alot of people are having that same problem, if not all vista users.

Re: Crash on start. Help?!

I'm having the exact same problem, I don't have Vista, I'm on XP, and i ran it in windowed mode and it gave some error regarding:

Font Titles_11 doesn't exist in paths fonts/english/800 or fonts/800

I have no clue what this means, but maybe some of you do

Re: Crash on start. Help?!

PR will crash with any resolution lower than 1024x756.

Change your video settings to a resolution of 1024x756 or above.

Re: Crash on start. Help?!

My resolution is 1024x756 and just when i choose a server, click on "deploy" it crashes to desktop without any kind of error. What's wrong?

My PC:
OS: Windows XP sp2
HDD: 35GB free
Intel Core2 Quad q66000 2.4 GHz
4GB ram

I follow all the instructions, I've PR 0.756 i've uninstalled it and then install PR0.8 core + levels, the game start, but then the same error again, it crashes to desktop with no mercy :(

Re: Crash on start. Help?!

Run PR in window mode. When it crashes, it will display the error. Post the error message here.

Re: Crash on start. Help?!

Wolfe they already did that above, I get NO ERRORS.

Re: Crash on start. Help?!

I have this same problem and I was seeing if I could even start a local server when i discovered I had no maps to choose from even though I had downloaded and installed the map pack properly.

This probably has to do with the crashing to desktop right when you try to join a server, so now I am redownloading the map packs and seeing what will happen.

I'm sorry but i cant run it in window mode, because of the commands i set in the desktop shortcut, including command "fullscreen 1" and so i think it's not possible for me to run in window mode, because if i change that parameters, PR doesn't run.

fullscreen 0
forces window mode

Re: Crash on start. Help?!

Ok thanks, next time i try, for now i completely uninstall bf2 and pr, i'm downloading again bf2compl.collection from ea store, cause maybe my .img file can be damaged, so i download it again (I've digital version of bf2) try to re-install it, install full 1.41 patch and then again pr 0.8... hope it works
